

# In SIMPATI®, smart integration is programmed in.

For Optimum Operation of Your Environmental Test Chamber

## Networking

The control software SIMPATI® makes it possible to optimally integrate environmental testing facilities into smart production processes.

- Ability to create a network of different test systems
- Up to 99 systems can be controlled, including extra measuring instruments

## Managing the Process

Control of the test systems is easier and saves time. The integrated monitoring routines make system operation more reliable. You can individually set the scope and frequency.

- Control test sequences
- Effortlessly write test programmes with the programme editor
- Easily manage programmes for production sequences and tests
- Management and administration of different users and user groups
- Easily configurable e-mail sending process when incidents occur
- Future events can be set and easily displayed via the planner (laboratory management)

## Analysis and Documentation

By analyzing and documenting test sequences, as well as including your specific measured data, an improved standard of quality can be guaranteed.

- Store measured data
- Record irregularities and functional disturbances during test sequences
- Print measured data as a chart
- Export measured data into other programmes for computational analysis
- Calculate gradients of process parameters and times of changes to process parameters
- Use clear charts to display analyses

## Stand the test of time.
