

## Stand the test of time.

At Weiss Technik we're thinking ahead—for your business, your people, and the innovative ideas you'll eventually put to the test. Rest assured, as standards change and as technology advances, your long-lasting testing equipment won't hold you back. In fact, when you partner with Weiss Technik, it will only propel you into the future.

## Are you testing tomorrow's innovations with yesterday's technology?

Unlike others in the industry, Weiss Technik innovates and engineers for the many years ahead of us—for products and technologies that don't even exist yet. Some call this future-proofing. We call it a serious competitive advantage for your business.

## Impact your business more... and the environment less.

At Weiss Technik, our unique energy efficient designs and extremely low GWP (Global Warming Potential) refrigerants protect the planet while boosting your bottom line. It's a win-win—for the future of the earth and the future of your business.

## Is your testing partner as global as you are?

Weiss Technik has 22 subsidiaries in 15 countries. We employ hundreds of engineers and service technicians throughout North America, Europe, and Asia. This ensures that we maintain a local presence you can always turn to—wherever you are, for whatever the future may bring.

## The only thing we test is everything.

The industry's largest product portfolio belongs to Weiss Technik. And we customize everything, meaning your options are truly endless. By asking the right questions, we build a system based on your business, its unique needs, and the needs you'll encounter in years to come.
